

**CSS RWD (Responsive Web Design)** is a design approach that makes websites look and function well on all devices—desktops, tablets, and phones—using **flexible layouts**, **media queries**, and **fluid images**.

---

## ✓ Key Concepts of CSS RWD

### 1. Viewport Meta Tag

Ensures proper scaling on mobile devices:

```
<meta name="viewport" content="width=device-width, initial-scale=1.0">
```

---

### 2. Fluid Layout (Percent-based Widths)

Use percentages instead of fixed widths:

```
.container {  
  width: 100%;  
  max-width: 1200px;  
  margin: auto;  
  padding: 0 20px;  
}
```

---

### 3. Responsive Media (Images & Videos)

Make media scale with screen size:

```
img, video {  
  max-width: 100%;  
  height: auto;  
}
```

---

## 4. Media Queries

Apply different styles at specific breakpoints:

```
/* Mobile First */
body {
  font-size: 16px;
}

@media (min-width: 768px) {
  body {
    font-size: 18px;
  }
}

@media (min-width: 1024px) {
  body {
    font-size: 20px;
  }
}
```

---

## 5. Flexible Grid Layouts

Use Flexbox or CSS Grid to adapt to screen sizes.

### Flexbox Example:

```
.flex-container {
  display: flex;
  flex-wrap: wrap;
  gap: 1rem;
}

.flex-item {
  flex: 1 1 100%;
}
```

```
}

@media (min-width: 768px) {
  .flex-item {
    flex: 1 1 48%;
  }
}

@media (min-width: 1024px) {
  .flex-item {
    flex: 1 1 30%;
  }
}
```

## Grid Example:

css

CopyEdit

```
.grid {
  display: grid;
  grid-template-columns: 1fr;
  gap: 1rem;
}

@media (min-width: 768px) {
  .grid {
    grid-template-columns: repeat(2, 1fr);
  }
}

@media (min-width: 1024px) {
  .grid {
    grid-template-columns: repeat(4, 1fr);
  }
}
```
